Music teacher Julie Johnson presents a series of lessons that follow the requirements of the College Board Advanced Placement Music Theory Exam. Included are clear explanations of theory elements, applications of concepts to musical excerpts, ear training and sight singing with each lesson, and drills, analysis and multiple choice questions.

This research investigates students experiences with high school music theory courses. Literature on this topic suggests that a large percentage of high school music theory courses focus primarily on drilling students with contrived exercises (Buonviri & Paney, 2014). Teachers often choose activities like sight singing and melodic/harmonic dictation because they are quantifiable assessment opportunities (e.g. Buonviri & Paney, 2014, 2015). In addition, many students take Advanced Placement (AP) Music Theory, a course can focus largely on drilling exercises in order to prepare for the AP Music Theory exam (Klonoski, 2006). This thesis argues that drilling exercises built from contrived musical examples may limit students growth as musicians. To collect data for this research, first and second year undergraduate music majors responded to a survey about their experiences in high school music theory classes. The questionnaire consisted of thirty-two questions that addressed the following topics: general teaching strategies, how students prepared for the AP Music Theory Exam (if applicable), and how students prepared to enter college music theory courses. The questionnaire also asked participants how well they thought high school music theory prepared them for college as music majors. Results indicated that high school music theory is taught and experienced in many ways.

This book is a hands-on investigation of the stages musicians go through as they learn to hear, read, and

perform music. It draws on the latest research in music perception and cognition, music theory, and pedagogy, along with centuries of insight from music theorists, composers, and performers. The first part explores the development of music listening skills, including such broader activities as dictation and transcription, and specific abilities such as meter perception, short-term musical memory, and tonic inference. The second part then examines the skills involved in reading and performing music. It looks at such physical skills as vocal production and eye movements and at such complex integrated tasks as sight-singing transpositions and modulations. Throughout the book the author presents these skills in their musical contexts and emphasizes their roles in the general development of musicality. *Aural Skills Acquisition* builds important bridges between music theory, cognitive psychology, and pedagogy. It subjects ideas from music theory to the rigors of psychological testing and combines findings from the psychology of learning with ideas and methods of contemporary music theory. It will prove an invaluable guide for music teachers, music theorists, and psychologists interested in music perception and cognition.

Check with the seller prior to purchase. -- The most engaging and musical Sight-Singing text on the market. Music for Sight Singing is structured around organized melodies drawn from the literature of composed music and a wide range of the world's folk music. Real music exercises allow readers to practice sight singing and develop their "mind's ear" -- the ability to imagine how music sounds without first playing it on an instrument. The ninth edition continues to introduce a host of important musical considerations beyond pitch and rhythm- including dynamics, accents, articulations, slurs, repeat signs, and tempo markings. The book's arrangement of simple to complex exercises lays the foundations for success. Learning Goals Upon completing this book, readers will be able to: Fluently read rhythms in simple and compound meters, including those in relatively unusual, irregular, or changing meter signatures. Sight sing melodies in any major or minor key, and in any diatonic mode. Effortlessly read all four common clefs. Understand common musical symbols and terms. Recognize and sing important harmonic features such as dominant seventh and Neapolitan chords. Improvise effectively from a variety of background structures such as a harmonic progression or an underlying contrapuntal framework. Negotiate chromatic passages from simple embellishing tones and tonicizations to modulations to post-tonal music. NOTE: MySearchLab does not come automatically packaged with this text.
