Install-Package Microsoft.EntityFrameworkCore.Tools Add-Migration InitialCreate Update-Database. This installs the PMC tools for EF Core. The Add-Migration command scaffolds a migration to create the initial set of tables for the model. The Update-Database command creates the database and applies the new migration to it.

For the EditFormcomponents or <input"/> components we inherit from the <InputBase<T>> and override the BuilderRenderTree(RenderTreeBuilder b) to have some more control, but the heavy lifting is still done in the core framework and the FAST or Fluent API didn' t change. Getting Started. Create a new Blazor application

Integrating-FAST-and-Fluent-Webcomponents-with-Blazor---

Entity Framework Core (EF Core) is an Object-Relational Mapping (ORM). It works between the application and the database. To explain how we can implement the relationships of our entities, I will be using the Code First approach (with a new database), which means that first I ' m going to the create the entities classes, and the EF Core will create the database and the tables, based on these ...

Fluentd is an open-source data collector for a unified logging layer. Fluentd allows you to unify data collection and consumption for better use and understanding of data.

Introduction-Fluentd

The first step is to prepare Fluentd to listen for the messages that will receive from the Docker containers, for demonstration purposes we will instruct Fluentd to write the messages to the standard output; In a later step you will find how to accomplish the same aggregating the logs into a MongoDB instance.
