Genomic Applications in Pathology provides a state-of-the-art review of the scientific principles underlying next generation genomic technologies and the required bioinformatics approaches to analyses of the daunting amount of data generated by current and emerging genomic technologies. Implementation roadmaps for various clinical assays such as single gene, gene panels, whole exome and whole genome assays are discussed together with issues related to reporting, including the pathologist's role in interpretation and clinical integration of genomic tests results. Genomic applications for site-specific solid tumors and hematologic neoplasms are detailed, as well as genomic applications in pharmacogenomics, inherited genetic diseases, and infectious diseases. The latest iteration of practice recommendations and guidelines in genomic testing, put forth by stakeholder professional organizations such as the Association for Molecular Pathology and the College of American Pathologists, are also discussed in the volume, as well as regulatory issues and laboratory accreditation related to genomic testing. Written by experts in the field, Genomic Applications in Pathology provides a comprehensive resource that is of great value to practicing molecular pathologists, hematopathologists, other subspecialized pathologists, general pathologists, pathology trainees, oncologists, and geneticists.

Substantial increases in agricultural investments in developing countries are needed to combat poverty and realize food security and nutrition goals. There is evidence that agricultural investments can generate a wide range of developmental benefits, but these benefits cannot be expected to arise automatically and some forms of large-scale investment carry risks for host countries. Although there has been much debate about the potential benefits and risks of international investment, there is no systematic evidence on the actual impacts on the host country and their determinants. In order to acquire an in-depth understanding of potential benefits, constraints and costs of foreign investment in agriculture and of the business models that are more conducive to development, FAO has undertaken research in developing countries. This publication summarizes the results of this research, in particular through the presentation of the main findings of case studies in nine developing countries. It presents case studies on policies to attract foreign investment in agriculture and their impacts on national economic development in selected countries in Africa, Asian and Latin America.

A comprehensive Statistical Appendix provides regional and country-by-country data in such areas as GDP, manufacturing, sector productivity, prices, trade, income distribution and living standards."--BOOK JACKET.
