The choice of target gene to discriminate plant pathogen represented a crucial point for the development of plant disease diagnosis systems and for the detection of the emergent plant pathogens. The 16S rDNA gene (ribosomal DNA) is traditionally used to ascribe a bacterial strain to a genus . The rDNA is present in many copies in each cell and allowed a very sensitive detection, when used as target.

Plant Pathogens - an overview | ScienceDirect Topics

The disease symptoms exhibited by multiple pathogens infecting a plant may be either more severe or less severe than if the plant were infected with just one of the pathogens. This is commonly seen in multiple infections due to viruses.

Plant Disease Diagnosis

Plant Pathogen Detection Inquiry Healthy crops are essential for sustainable agricultural production.

However, the growth of crops are often threatened by plant pathogens, such as bacteria, fungi, and viruses, which could cause plant diseases that eventually lead to

Plant Pathogen Detection - Lifeasible

Plant pathogen detection is important as first step to manage a plant disease in greenhouses, field conditions and at the country borders. Current immunological techniques used to detect pathogens in plant include enzyme-linked immunosorbent assays (ELISA) and direct tissue blot immunoassays (DTBIA).

DNA microarrays are also of great use for simultaneous pathogen detection. This is important, as plants are often infected with several pathogens, some of which may act together to cause a disease complex. Microarrays consist of pathogen-specific DNA sequences immobilized onto a solid surface.

Most viruses that infect plants use RNA to carry their genomic information; timely and robust detection methods are crucial for efficient control of these diverse pathogens. The RNA viruses, potexvirus (Potexvirus, family Alphaflexiviridae), potyvirus (Potyvirus, family Potyviridae), and tobamovirus (Tobamovirus, family Virgaviridae) are among the most economically damaging pathogenic plant ...

A plant pathogen is an organism that causes a disease on a plant. Although relatives of some plant pathogens are human or animal pathogens, most plant pathogens only harm plants. Some plant pathogens can make immune-depressed people sick, however. These are called “ trans-kingdom ” pathogens.
